

Comprehensive Clinical Note - Patient 01

=== 1. DEMOGRAPHICS & VITALS ===

Age: 38 years

Sex at Birth: Male

Weight: 82 kg

Height: 180 cm

BMI: 25.3

Pregnancy/Lactation Status: No

=== 2. PRIMARY DIAGNOSIS & GENETICS ===

Official Disease Name: Pompe Disease (Alpha-glucosidase deficiency)

Date of Diagnosis: 2019-04-12

Genetic Mutation Code: GAA c.-32-13T>G

Family History: One sibling with late-onset Pompe disease.

=== 3. CLINICAL SYMPTOMS ===

Active Symptoms: Severe proximal muscle weakness, progressive respiratory distress, chronic fatigue.

Symptom Severity/Mobility: Requires cane for walking >50 meters. Moderate dyspnea on exertion.

Age of Onset: 33 years

=== 4. LABORATORY BIOMARKERS ===

Kidney Function (eGFR): 85 mL/min/1.73m²

Liver Function (ALT): 35 U/L

Liver Function (AST): 40 U/L

Cardiac Function (Ejection Fraction): 55%

Blood Counts: WBC 6.5K, RBC 4.8M, Platelets 210K

=== 5. MEDICAL & SURGICAL HISTORY ===

Current Medications: Alglucosidase alfa (Lumizyme) bi-weekly infusions.

Past Experimental Trials: None in the last 6 months.

Transplant History: No history of solid organ or stem cell transplant.

Comorbidities: Mild asthma.

Surgeries: Appendectomy (2010).

Disability Status: 40% physical disability rating.

=== 6. LIFESTYLE FACTORS ===

Substance History: Non-smoker. Social alcohol use (1-2 drinks/week).

Allergies: Penicillin (Rash).
