

Clinical Notes - Patient 02 (Gaucher Disease)

PATIENT PROFILE

Age: 45

Sex: Male

Diagnosis: Gaucher Disease

CLINICAL PRESENTATION

Patient is a 45-year-old male diagnosed with Type 1 Gaucher disease. He presents today with complaints of abdominal pain and bone pain.

Physical examination reveals significant hepatosplenomegaly. Recent blood work confirms anemia and thrombocytopenia.

PLAN

Evaluate for enzyme replacement therapy (ERT) efficacy. Monitor complete blood count and spleen volume. Patient is open to new clinical trials targeting substrate reduction therapy.
