

Comprehensive Clinical Note - Patient 02

=== 1. DEMOGRAPHICS & VITALS ===

Age: 45 years

Sex at Birth: Female

Weight: 65 kg

Height: 165 cm

=== 2. PRIMARY DIAGNOSIS & GENETICS ===

Official Disease Name: Gaucher Disease Type 1

Date of Diagnosis: 2010-08-22

Family History: None known.

=== 3. CLINICAL SYMPTOMS ===

Active Symptoms: Severe bone pain, massive splenomegaly, chronic fatigue.

Symptom Severity/Mobility: Ambulatory, but experiences frequent bone crises.

Age of Onset: 29 years

=== 4. LABORATORY BIOMARKERS ===

Cardiac Function (Ejection Fraction): 60%

Blood Counts: WBC 3.2K (Leukopenia), RBC 3.8M (Anemia), Platelets 95K (Thrombocytopenia)

=== 5. MEDICAL & SURGICAL HISTORY ===

Current Medications: Imiglucerase (Cerezyme) infusions.

Past Experimental Trials: Participated in eliglustat trial in 2012.

Transplant History: None.

Comorbidities: Osteopenia.

Surgeries: Splenectomy considered but not performed.

Disability Status: None.

=== 6. LIFESTYLE FACTORS ===

Substance History: Former smoker (quit 5 years ago).

Allergies: None known.
